Profile

Fullstack Software Engineer with 4+ years of experience delivering enterprise applications and internal platforms across banking, telecommunications, healthcare, automotive, and public-sector organizations. Experienced in building workflow-driven systems, approval processes, developer platforms, project management solutions, and CI/CD-enabled applications. Skilled in frontend and backend development, cloud deployment, DevOps practices, and translating business requirements into scalable software solutions.

Skills

Frontend: React.js, Next.js, Vue.js, TypeScript, JavaScript, Tailwind CSS

Backend: Node.js, Express.js, Hono, Golang, REST APIs

Databases: Oracle, PostgreSQL, MySQL, Supabase, Redis

DevOps & Cloud: OpenShift, Kubernetes, Docker, Helm, Forgejo Actions, Jenkins, GitLab CI/CD, SonarQube, Azure, Harbor

Web & Infrastructure: OpenResty, NGINX, Linux, Mise, GCP, Azure

Practices: System Design, CI/CD, Microservices, Agile Scrum

Work Experience

PT Mitra Integrasi Informatika (MII)

Fullstack Software Engineer

November 2021 – Present | Jakarta

Selected Client Projects :

Bank Indonesia (BI) | Apr 2026 – Present

- Lead technical delivery, deployment, and operational management for three internal platforms—IDSP, PSP, and OTP—across SIT and UAT environments.
- Designed and implemented a self-hosted CI/CD platform using Forgejo, Forgejo Actions, mise, Bitbucket mirroring, and OpenShift, replacing manual deployment workflows.
- Established artifact promotion from SIT to UAT without rebuilding application images, improving release consistency and reducing deployment risk.
- Revamped Dockerfiles, Helm charts, and environment configuration management across all three portals, eliminating manually maintained environment mappings on deployment VMs.
- Migrated frontend infrastructure from NGINX to OpenResty and implemented dynamic routing, cache-control, deployment metadata, and frontend version-checking capabilities.
- Resolved authentication race conditions and stale frontend caching issues that affected login reliability following application deployments.
- Designed and enhanced organization registration, participant onboarding, approval, SMTP notification, and governance workflows for the IDSP and OTP portals.
- Coordinate development, debugging, OpenShift operations, and release activities across the portal team for SIT and UAT delivery.

PT. Telekomunikasi Seluler (Telkomsel) | Jan 2026 – Jun 2026

- Contributed to the development of an Internal Developer Platform (IDP) used to centralize developer onboarding, repository management, and CI/CD workflows.
- Developed pipeline template management features, enabling engineering teams to apply standardized CI/CD configurations through a self-service platform.
- Built variable management capabilities and GitLab integrations that simplified repository configuration and deployment setup activities.
- Developed DevSecOps readiness modules used to monitor CI/CD adoption, deployment status, and compliance across development teams.
- Developed reusable Next.js application boilerplates with authentication, shared layouts, API integrations, and Amazon Bedrock connectivity to accelerate internal AI application development.

Bank CIMB | Dec 2025 – Jan 2026

- Contributed to CI/CD modernization initiatives supporting API management platform deployment and OpenShift-based application delivery processes.
- Implemented Jenkins and SonarQube integrations to automate build, deployment, and code quality validation workflows.
- Optimized OpenShift deployment pipelines by evaluating alternative build strategies, improving deployment efficiency and reducing delivery overhead.
- Implemented rollback mechanisms to improve deployment reliability and support controlled recovery during failed releases.
- Integrated container image signing and verification processes to strengthen deployment security and governance controls.

Bank DKI (BPBUMD) | Jul 2025 – Dec 2025

- Developed a digital recruitment platform supporting the end-to-end selection process for executive positions across DKI Jakarta regional-owned enterprises (BUMD).
- Collaborated with stakeholders to translate recruitment and evaluation processes into web-based workflows aligned with operational and administrative requirements.
- Developed recruitment management features covering company administration, job vacancies, candidate reviews, and multi-stage evaluation processes including administrative screening, paper tests, psychological assessments, and interviews.
- Implemented authentication and access control mechanisms using Supabase Auth and Row-Level Security (RLS) to protect sensitive recruitment data.

KB Finansia Multi Finance (Kredit Plus) | Jun 2025 – Jul 2025

- Improved development communication workflows between technical teams and stakeholders.
- Helped standardize issue tracking and collaboration processes for mobile application teams.

PT Astra International Tbk | Aug 2023 – Oct 2024

- Contributed to the development of AUTO2000's public-facing digital platform and internal content management system (CMS), supporting marketing, product information, sales, and content administration activities.
- Developed customer-facing promotional and product knowledge features that enhanced the digital experience for customers and prospective buyers.
- Improved SEO implementation by transitioning metadata generation to server-side rendering, ensuring dynamic content could be properly indexed by search engines.
- Built reusable frontend components and shared UI patterns that improved consistency and accelerated feature delivery across multiple applications within a monorepo architecture.
- Developed CMS capabilities for content publishing, product management, promotional content administration, rich-text editing, and content scheduling workflows used by internal business teams.

PT Indosat Ooredoo Hutchison Tbk | Nov 2022 – Jun 2025

- Contributed to the development of PMIS (Project Management Information System), an enterprise platform used to manage telecommunications infrastructure projects, approvals, documentation, and operational workflows.
- Developed and enhanced project acceptance and endorsement workflows, supporting ATP processes, milestone approvals, approval-chain visibility, resubmission handling, and notification-driven reviews.
- Implemented project management features including Change Requests, Issue Ticketing, Baseline Management, and Documentation Management to support project tracking and operational coordination.
- Collaborated closely with project managers and stakeholders to validate workflow behavior and ensure system functionality aligned with business and operational requirements.
- Led the migration of document storage from Azure-based solutions to Google Cloud Storage (GCS), implementing signed URL access mechanisms to improve file management and document delivery processes.

PT Dexa Medica | Nov 2021 – Nov 2022

- Contributed to the development of internal Supplier Portal and Billing applications used by Dexa Medica business teams to manage supplier-related and billing processes.
- Supported DevOps and infrastructure initiatives by implementing CI/CD workflows using Jenkins, Bitbucket, Harbor, and NGINX to improve deployment automation and release consistency.
- Contributed to application modernization efforts through the migration of legacy Angular applications to Vue.js.
- Developed supplier management and billing features, collaborating with project managers and stakeholders to deliver business workflows aligned with evolving operational requirements.

Education

Widyatama University , <i>Information Systems</i> Bachelor's Degree in Information Systems – Widyatama University <i>Graduated June 2025</i>	Bandung, Indonesia
Telkom University , <i>Computer Engineering</i> Diploma's Degree in Computer Engineering – Telkom University <i>Graduated March 2020</i>	Bandung, Indonesia
